

**Kitsap County Health District** has been using Champ products since March 2006. They like using Nightingale Notes because it is web-based which makes it easier to check in/out charts. Nightingale Notes provides nurses with easier access to client data on the go and gives them the opportunity to telework without going back to the office in order to do their charting.

Kitsap County staff appreciates the easy reporting feature in Nightingale Notes that allows them to create detailed KBS reports. They have the ability to generate outcome reports on the knowledge, behavior, and status; and are able to talk in objective way about improvements in clients' lives.

Scheduling allows nurses to view multiple events at once, allowing the staff to schedule meetings. *"Nightingale Notes allows the documentation of client outcomes and connection of those to specific interventions. We are able to work more easily with local jurisdictions to compare data, using standardized language."* –Suzanne Plemmons, Community Health Director.

Nightingale Notes has also helped Kitsap County staff be more efficient in that the software reduces the time to handle documents, which is a big time-saver to the already busy nurses.

Thank you to Kitsap County Health District for staying on the leading edge of public health charting and for their Champ patronage.
