

Marathon County Health Department has been a part of the Champ family since the year 2005. In December 2011, they were able to secure funding to upgrade their documentation system and upgraded from Touchpoint to Nightingale Notes. *"We chose Nightingale Notes because of the applicability of the system to public health, the intuitive, user friendly features, the reporting capabilities, the easy customizing, and being web based. We also liked that Touchpoint and Nightingale Notes both followed similar ways of charting, including both being Omaha System based, so training would be easier,"* said Ann Peters who is a Public Health Nurse at Marathon County. They mainly like the fact that the layout and tabs in Nightingale Notes is easy to use and customize. One of the main features used most by Marathon County is the reporting feature.

Thank you to Marathon County Health Department for staying on the leading edge of public health charting and for their Champ patronage.
